

the range of coolers

HYDRAZON

OFFICE

The cooler that
makes the difference.

blupura

Cool, yes we are.

HYDRAZON

Having a source of high-quality drinking water in your workplace is not a question of convenience, but of hydration and wellbeing. The design and performance of Hydrazon are the answer.

Essential and elegant, to fit in stylishly in any surroundings. Intelligent in its design, to offer sufficient internal space to house the desired filtration (reverse osmosis - only for no FIZZ models - or active carbon).

Efficient in its performance and simple in its functionality, to dispense up to 4 different types of water. HYDRAZON is the perfect solution for any office or workplace.

Optional extras:

- Integrated cup dispenser.
- Extra space for 6 kg CO₂ cylinder.
- Filters.

Blupura Direct Chill

for 15 lt/h

It's the direct chill hygienic technology with high capacity carbonator.

Dry Cooling

for 45 lt/h

This is an innovative direct cooling technology with the serpentine water coils (stainless steel) and the refrigerant gas coils (copper) housed within a single aluminium cast.

Use of totally natural (HC) refrigerant gases, such as R600a.

An ecological choice, with the added advantage of a more silent compressor and ensuring a longer life to the entire refrigerant apparatus.

The Hot version with 8 litres of hot water

Hydrazon Hot model dispenses hot water that is perfect for making tea and infusions.

Hydrazon RO

Inside the RO model are the reverse osmosis membranes: the semipermeable membranes block the impurities dissolved in the water, reducing the content of the minerals contained. The water, once osmotic, will therefore retain a very low fixed residue.

Dispensing area

Tall and illuminated, with drip-tray featuring an alarm and an optional outlet.

Energy saving

only for the Hot version

When required, the unit can function in stand-by mode, with consumption reduced by 75% compared to when fully operational.

Drip-tray full alert

A LED indicates when the drip-tray is full.

HYDRAZON

TOUCH FREE

Hydrazon's design and performance meet Touch Free technology: a convenient source of great water, to boost wellbeing and achieve total hygiene.

Hydrazon models are activated thanks to capacity proximity: to dispense, just position your finger 1.5 cm away from the panel and keep it there until the dispensing is complete. By removing your finger the dispensing operation is interrupted automatically.

As standard:

nano silver pipe

NANO SILVER PROTECTION

The external surface is treated with Nano Silver Protection technology which uses silver ions, and is capable of reducing bacterial proliferation by 99.999% in 24 hours.

Hydrazon Touch Free

Accessories

Bluprotection

At the end of the production process, the water circuits of each Blupura water cooler are filled with the BLUPROTECTION mixture in order to remove any Pseudomonas and avoid any proliferation.

Integrated cup dispenser.

Blupura Cups

Ecological cups in recyclable paper with a diameter of 7 cm, perfect for the BLU2GO automated dispensing system.

UV filtration in line (12W)

In line UV light.

Sanitizing products

Sanitizing and cleaning products for the installations.

Filters

Purifies the water making it crystal-clear, removing odour and taste impurities. It totally eradicates any impurity with a size of 0.5 microns, eliminates all odours and unwanted tastes such as chlorine, asbestos fibres and number of microorganisms including crypto-sporidium.

- Filtro Blupura sediment (capacity 19000 lt.)
- Filtro Blupura Carbon Block (capacity 19000 lt.)
- Filtro RO 50 GDP only for Hydraxon RO (capacity 2-3 years)
- Blupura RO GAC 1/4 Postfilter

UVC lamp at exit (4W)

A UV light at the end of every tap. As demonstrated by numerous studies, UV light acts as a strong steriliser therefore preventing the growth of bacteria.

Nano Silver pipe

Stainless steel tube AISI 316L with an innovative nanotechnology-based SILVER ion treatment on the surface. Silver is naturally bacterio-static and so reduces bacterial growth in the pipe. The surface treated with these nano particles is much more compact and smooth: this prevents the formation of deposits, biofilm or bacterial colonies and because the water flows better through the tube, also reduces dripping at the end of dispensing.

Pressure reducers

CO2 pressure reducer for refillable or single-use cylinder, water block, water pressure reducer.
